

New 25-30W DC/DC's Feature Wide (4-to-1) Input Voltage Ranges

Look for Applications in Transportation, Mil/Aerospace, Analytical Instruments and Wireless

Greetings:

We're announcing the "Q" models of our UHE Series as distinct new products. The UHE-Q's (Q = quad) offer 4-to-1 (9-36V or 18-75V) input voltage ranges and standard 3.3/5/12/15V outputs at powers up to 30W.

Many Customers Need Them

We're all digging a little deeper these days . . . not only in the telecom/datacom market but also in DATEL's more traditional commercial/industrial markets. Surprisingly, we have uncovered a number of opportunities for wide-input-range DC/DC's, and we have responded.

Every UHE-Q currently listed on our data sheet has been developed in response to a specific customer request and subsequently added to the standard product lineup. Now we are highlighting them as a group and announcing them to the world.

One Data Sheet

Despite this announcement, we're keeping the UHE-Q's and non-Q's on one data sheet. We're highlighting the "Q's" with a splash on the front cover, and we've added background shading to the Ordering Guide on page 2. Check out the [new data sheet](#)

We've added the UHE-Q [new product announcement to www.datel.com](#). Please read the press release. It has lots of applications information. Mail to sales@mesamw.com for price information

Regards,

Chuck Sabolis
